EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Susan Yee, Reg. No. 41,388 on August 19, 2005.

The application has been amended as follows:

In Claim 2 line 1 "filtering is performed" has been deleted in favor of : -- processor is configured for selecting said optimal high pass filter for performing filtering --

In Claim 3 " a criterion for selecting " has been deleted in favor of -- the processor is configured to select --

In Claim 4 " a criterion for selecting " has been deleted in favor of -- the processor is configured to select --

In Claim 5 the language " a criterion for selecting " has been deleted in favor of - - the processor is configured to select --.

In Claim 6 "filtering is performed " has been deleted in favor of -- processor is configured for selecting said optimal high pass filter for performing filtering --.

In each of claims 10, 11 and 12 " a criterion for selecting " has been deleted in favor of -- the processor is further configured to select --, and thereafter the language " further comprises " has been deleted.

In each of claims 13 and 14 the language " is performed " has been deleted in favor of -- high pass filter is configured to perform --.

In each of claims 33 and 34 in line 1 only, before " number " "infinite " has been changed to -- finite --.

The terminology "select an optimal high pass filter" in the base claims 1 and 9 is understood to be generic to both the configuration by selection of operational parameters of a filter as well as the selection of discrete filters as for example is claimed in claim 7.

The following is an examiner's statement of reasons for allowance: In addition to the art of record, Mo et al (US6296612) is directed to non-iterative wall filter coefficient selection based upon the mean and variance of the clutter frequency, and (US5961461) to adaptive high pass filter weighting for B-mode enhancement. Huebscher et al (US4324258) is directed to recursive loop filtering of clutter by subtracting stationary or near stationary Doppler signals. None of the prior art alone or in combination teaches iterative determination of high pass clutter selection based upon magnitude and mean frequency of the ultrasound colorflow data signal or upon the recited filtered data autocorrelation relationship using the original colorflow data for the iterations..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication should be directed to Jaworski Francis J. at telephone number 571-272-4738.
